

## **Community Skill-Sharing Platform**

The goal of my platform would be to allow users to share and learn about their experiences and skills with others. Below are the key features that could be included:

### **User Profiles**

In this section, new users sign up with their email and password. And that guy who has an account, he/she sign in. User can update and delete their post.

### **Skill Sharing and Learning**

In this section, user can share their skill and experiences and learn about other's experiences and skill. And can give them impressions on their in emoji forms.
